

Files A1 and A2 do not require any changes before compilation. File A3 accesses text files, for this reason the paths to these files will have to be changed in the source file. These changes will have to be done as listed below.

Line 23:- `FileInputStream input_file = new FileInputStream(path to Input plaintext file);`

Line 94:- `FileInputStream input_file = new FileInputStream(path to Input plaintext file);`

Note:- Input file must only contain ASCII Characters.

:- Random_ASCII_Plaintext_Generation.java is included to generate a file containing random ASCII plaintext input.
